OriginPulse Meeting Follow-up

■ Generated by **OriginPulse** | ■ 2026-06-12 18:43 UTC | ■ 7 Jira tickets

■ Meeting Summary

The team reviewed the first 48-hour deployment of the fetal anomaly detection model, identified a gestational-age normalization bug in the Westbridge ingestion pipeline, agreed on monitoring enhancements, clinical annotation tasks, UI copy updates, and partner communication.

■ Action Items & Jira Tickets

■ **ORIG-1** | ■ Alex | ■ Due 2026-06-12

Fix Westbridge gestational-age normalization bug, reprocess affected scans, add fallback

■ **ORIG-2** | ■ Alex | ■ Due 2026-06-15

Add category-level monitoring panel for abdominal-wall findings

■ **ORIG-3** | ■ Jamie | ■ Due 2026-06-12

Provide provisional drift threshold for abdominal-wall category monitoring

■ **ORIG-4** | ■ Jamie | ■ Due 2026-06-17

Coordinate and complete annotation of fifty new Northlake scans

■ **ORIG-5** | ■ Sarah | ■ Due 2026-06-11

Update sprint board with UI copy task, draft new overlay wording

■ **ORIG-6** | ■ Alex | ■ Due 2026-06-12

Send technical definition of failed preprocessing scans to Sarah

■ **ORIG-7** | ■ Sarah | ■ Due 2026-06-12

Send partner update with pilot metrics and UI copy after receiving inputs

Review `Unassigned` or `TBD` items before the next clinical pilot sync.
